PROFESSIONAL PROFILE

Product-oriented Full Stack Developer with experience developing SaaS applications for e-commerce, internal systems, and tools used by real merchants. I collaborate with product, design, and operations teams to build scalable, user-centric solutions.

WORK EXPERIENCE

Full Stack Developer | Leren

July 2025 - present

- Development and evolution of LerenTools, a SaaS platform for e-commerce within the Tiendanube ecosystem.
- Implementation of new features and platform improvements, enhancing scalability and performance.
- Development of applications that provide merchants with customization, engagement, and conversion opportunities.
- Design and implementation of products and features with direct impact on customer experience and interaction.
- Continuous optimization of processes, workflows, and platform architecture to support business growth.
- Collaboration with design, product, and operations teams in agile environments, participating from requirements gathering through deployment.
- Involvement in architectural decisions, data modeling, and scalability initiatives, contributing to the sustainable growth of products handling large and continuously growing datasets.

Full Stack Developer | RO Medical

November 2024 - April 2025

- Maintenance of the back-office system to optimize processes and ensure scalability.
- Refactoring and optimization of JavaScript and PHP code, achieving significant improvements in response times.
- Development of new system sections, enhancing usability and improving the user experience.
- Real-time bug fixing, ensuring system availability and reducing downtime.
- System development with multidisciplinary teams to adapt it to the business and meet technical requirements.
- Integration of tools for business management, process automation, and task organization.

Front-end Developer | WapiFirma

March 2024 - May 2024

- Development and maintenance of responsive web interfaces in collaboration with the Back-end team.
 - Implementation of new features, correction of incidents and continuous optimization of the application.
 - Participation in the product improvement cycle through updates and evolutionary maintenance.
 - Design and development of user-centered experiences, prioritizing usability and accessibility.
 - Optimization of the application's structure and performance to improve the browsing experience.
 - Integration and consumption of REST APIs for dynamic data management and visualization.
-
